Setting up ESLint in React

- Add Dev Dependencies by below command

  npm i -D Babel-eslint Eslint Eslint-config-airbnb Eslint-config-airbnb-base Eslint-plugin-import Eslint-plugin-jsx-a11y Husky lint-staged

- Add below line in your script tag

  "lint": "eslint src/."

- Add below configuration next to "**scripts**" or "**devDependencies**" object in package.json file

  ```
  "husky": {
   "hooks": {
     "pre-commit": "lint-staged"
   }
  },
  "lint-staged": {
   "*.js": [
     "eslint --fix",
     "git add"
   ]
  }
  ```

- Create **.eslintrc.json** file and add below code in your main project Folder

  ```
  {
     "extends": "airbnb-base",
     "rules": {
        "comma-dangle": [1, "always-multiline"],
        "func-names": 0,
        "no-param-reassign": 0,
        "space-before-function-paren": 0,
        "space-before-blocks": 0,
        "camelcase": 1,
        "semi": 1,
        "max-len": [1],
        "no-else-return": 1,
        "no-underscore-dangle": ["off"],
  ```

```
      "guard-for-in": 1,
      "no-restricted-syntax": 1,
      "no-shadow": 1,
      "consistent-return": 1,
      "spaced-comment": 1,
      "padded-blocks": 1,
      "indent": ["error", 2, { "MemberExpression": 1}]
   },
    "parser": "babel-eslint"
}
```

- Use below command to test your code with lint.

  npm run lint

- **Resolve lint error and try to commit.**
